Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

### AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings of claims in the application:

#### LISTING OF CLAIMS

1-58 (Canceled)

59. (Previously Presented) An application software program, comprising:  
an object-oriented, verifiable, type-safe and pointer-safe sequence of instructions  
residing on a computer-readable medium, said instructions comprising operation  
codes and operands, said program operable to be loaded to and executed by a  
resource-constrained device, said instructions previously converted from at least  
one class file, said conversion transforming at least one reference to a constant  
pool to inline data in said instructions.

60. (Previously Presented) The software program of claim 59 wherein one or more of  
said references to said constant pool are transformed into inline data in operands in  
one or more of said instructions.

61. (Previously Presented) The software program of claim 59 wherein one or more of  
said references to said constant pool are transformed into inline data in operation  
codes in one or more of said instructions.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

62. (Previously Presented) The software program of claim 59 wherein said resource-constrained device is based on a 16-bit processor architecture.

63. (Previously Presented) The software program of claim 59 wherein said resource-constrained device is based on an 8-bit processor architecture.

64. (Previously Presented) The software program of claim 59 wherein said resource-constrained device comprises a random access memory with a capacity of no more than about 64 kilo-bytes.

65. (Previously Presented) The software program of claim 59 wherein said resource-constrained device comprises a random access memory with a capacity of no more than about 4 kilo-bytes.

66. (Previously Presented) The software program of claim 59 wherein said instructions are configured for execution by a virtual machine running on a microprocessor residing on said resource-constrained device.

67. (Previously Presented) The software program of claim 59 wherein said resource-constrained device comprises a smart card.

68. (Previously Presented) The software program of claim 59 wherein said resource-constrained device comprises an application-specific integrated circuit (ASIC).

Appl. No.: 09/243,101  
Amtd. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

69. (Previously Presented) An application software program, comprising:  
an object-oriented, verifiable, type-safe and pointer-safe sequence of instructions  
residing on a computer-readable medium, said instructions comprising operation  
codes and operands, said program operable to be loaded to and executed by a  
resource-constrained device, said instructions previously converted from at least  
one class file, said instructions comprising at least one composite instruction for  
performing an operation on a current object.

70. (Previously Presented) The software program of claim 69 wherein said resource-  
constrained device is based on a 16-bit processor architecture.

71. (Previously Presented) The software program of claim 69 wherein said resource-  
constrained device is based on an 8-bit processor architecture.

72. (Previously Presented) The software program of claim 69 wherein said resource-  
constrained device comprises a random access memory with a capacity of no more  
than about 64 kilo-bytes.

73. (Previously Presented) The software program of claim 69 wherein said resource-  
constrained device comprises a random access memory with a capacity of no more  
than about 4 kilo-bytes.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

74. (Previously Presented) The software program of claim 69 wherein said instructions

are configured for execution by a virtual machine running on a microprocessor  
residing on said resource-constrained device.

75. (Previously Presented) The software program of claim 69 wherein said resource-  
constrained device comprises a smart card.

76. (Previously Presented) The software program of claim 69 wherein said resource-  
constrained device comprises an application-specific integrated circuit (ASIC).

77. (Previously Presented) A resource-constrained device comprising:  
a memory for storing an application software program comprising an object-oriented,  
verifiable, type-safe and pointer-safe sequence of instructions, said instructions  
comprising operation codes and operands, said instructions previously converted  
from at least one class file, said conversion transforming at least one reference to  
a constant pool to inline data in said instructions; and  
a virtual machine implemented on a microprocessor, said virtual machine configured  
to execute said sequence of instructions.

78. (Previously Presented) The resource-constrained device of claim 77 wherein one or  
more of said references to said constant pool are transformed into inline data in  
operands in one or more of said instructions.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

79. (Previously Presented) The resource-constrained device of claim 77 wherein one or more of said references to said constant pool are transformed into inline data in operation codes in one or more of said instructions.

80. (Previously Presented) The resource-constrained device of claim 77 wherein said resource-constrained device is based on a 16-bit processor architecture.

81. (Previously Presented) The resource-constrained device of claim 77 wherein said resource-constrained device is based on an 8-bit processor architecture.

82. (Previously Presented) The resource-constrained device of claim 77 wherein said resource-constrained device comprises a random access memory with a capacity of no more than about 64 kilo-bytes.

83. (Previously Presented) The resource-constrained device of claim 77 wherein said resource-constrained device comprises a random access memory with a capacity of no more than about 4 kilo-bytes.

84. (Previously Presented) The resource-constrained device of claim 77 wherein said resource-constrained device comprises a smart card.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

85. (Previously Presented) The resource-constrained device of claim 77 wherein said resource-constrained device comprises an application-specific integrated circuit (ASIC).

86. (Previously Presented) The resource-constrained device of claim 77 wherein said resource-constrained device comprises a Java Card™ technology-enabled smart card.

87. (Previously Presented) A resource-constrained device comprising:  
a memory for storing an application software program comprising an object-oriented, verifiable, type-safe and pointer-safe sequence of instructions, said instructions comprising operation codes and operands, said instructions previously converted from at least one class file, said instructions comprising at least one composite instruction for performing an operation on a current object; and  
a virtual machine implemented on a microprocessor, said virtual machine configured to execute said sequence of instructions.

88. (Previously Presented) The resource-constrained device of claim 87 wherein said resource-constrained device is based on a 16-bit processor architecture.

89. (Previously Presented) The resource-constrained device of claim 87 wherein said resource-constrained device is based on an 8-bit processor architecture.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

90. (Previously Presented) The resource-constrained device of claim 87 wherein said resource-constrained device comprises a random access memory with a capacity of no more than about 64 kilo-bytes.

91. (Previously Presented) The resource-constrained device of claim 87 wherein said resource-constrained device comprises a random access memory with a capacity of no more than about 4 kilo-bytes.

92. (Previously Presented) The resource-constrained device of claim 87 wherein said resource-constrained device comprises a smart card.

93. (Previously Presented) The resource-constrained device of claim 87 wherein said resource-constrained device comprises an application-specific integrated circuit (ASIC).

94. (Previously Presented) The resource-constrained device of claim 87 wherein said resource-constrained device comprises a Java Card™ technology-enabled smart card.

95. (Previously Presented) A method for using an application software program including an object-oriented, verifiable, type-safe and pointer-safe sequence of instructions, the method comprising:

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

receiving said software program in a resource-constrained device having a memory,  
said instructions comprising operation codes and operands, said instructions  
previously converted from at least one class file, said conversion transforming at  
least one reference to a constant pool to inline data in said instructions; and  
executing said sequence of instructions on said resource-constrained device.

96. (Previously Presented) The method of claim 95, further comprising accessing said  
software program over a computer network prior to downloading said program onto  
said resource-constrained device.

97. (Previously Presented) The method of claim 95, further comprising storing said  
sequence of instructions on said resource-constrained device.

98. (Previously Presented) The method of claim 95, further comprising accessing said  
software program over the Internet prior to downloading said program onto said  
resource-constrained device.

99. (Previously Presented) The method of claim 95, further comprising transforming  
constant pool indices that appear in the received set of instructions to corresponding  
data values.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

100.(Previously Presented) The method of claim 95 wherein one or more of said references to said constant pool are transformed into inline data in operands in one or more of said instructions.

101.(Previously Presented) The method of claim 95 wherein one or more of said references to said constant pool are transformed into inline data in operation codes in one or more of said instructions.

102.(Previously Presented) The method of claim 95 wherein said resource-constrained device is based on a 16-bit processor architecture.

103.(Previously Presented) The method of claim 95 wherein said resource-constrained device is based on an 8-bit processor architecture.

104.(Previously Presented) The method of claim 95 wherein said memory comprises a random access memory with a capacity of no more than about 64 kilo-bytes.

105.(Previously Presented) The method of claim 95 wherein said memory comprises a random access memory with a capacity of no more than about 4 kilo-bytes.

106.(Previously Presented) The method of claim 95 wherein said instructions are configured for execution by a virtual machine running on a microprocessor residing on said resource-constrained device.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

107.(Previously Presented) The method of claim 95 wherein said resource-constrained device comprises a smart card.

108.(Previously Presented) The method of claim 95 wherein said resource-constrained device comprises an application-specific integrated circuit (ASIC).

109.(Previously Presented) A method for using an application software program including an object-oriented, verifiable, type-safe and pointer-safe sequence of instructions, the method comprising:  
receiving said software program in a resource-constrained device having a memory,  
said instructions comprising operation codes and operands, said instructions previously converted from at least one class file, said instructions comprising at least one composite instruction for performing an operation on a current object;  
and  
executing said sequence of instructions on said resource-constrained device.

110.(Previously Presented) The method of claim 109, further comprising accessing said software program over a computer network prior to downloading said program onto said resource-constrained device.

111.(Previously Presented) The method of claim 109, further comprising storing said sequence of instructions on said resource-constrained device.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

112.(Previously Presented) The method of claim 109, further comprising accessing said software program over the Internet prior to downloading said program onto said resource-constrained device.

113.(Previously Presented) The method of claim 109, further comprising transforming constant pool indices that appear in the received set of instructions to corresponding data values.

114.(Previously Presented) The method of claim 109 wherein one or more of said references to said constant pool are transformed into inline data in operands in one or more of said instructions.

115.(Previously Presented) The method of claim 109 wherein one or more of said references to said constant pool are transformed into inline data in operation codes in one or more of said instructions.

116.(Previously Presented) The method of claim 109 wherein said resource-constrained device is based on a 16-bit processor architecture.

117.(Previously Presented) The method of claim 109 wherein said resource-constrained device is based on an 8-bit processor architecture.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

118.(Previously Presented) The method of claim 109 wherein said memory comprises a random access memory with a capacity of no more than about 64 kilo-bytes.

119.(Previously Presented) The method of claim 109 wherein said memory comprises a random access memory with a capacity of no more than about 4 kilo-bytes.

120.(Previously Presented) The method of claim 109 wherein said instructions are configured for execution by a virtual machine running on a microprocessor residing on said resource-constrained device.

121.(Previously Presented) The method of claim 109 wherein said resource-constrained device comprises a smart card.

122.(Previously Presented) The method of claim 109 wherein said resource-constrained device comprises an application-specific integrated circuit (ASIC).

123.(Previously Presented) An apparatus for using an application software program including an object-oriented, verifiable, type-safe and pointer-safe sequence of instructions, the apparatus comprising:  
means for receiving said software program in a resource-constrained device having a memory, said instructions comprising operation codes and operands, said instructions previously converted from at least one class file, said conversion

Appl. No.: 09/243,101

Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

transforming at least one reference to a constant pool to inline data in said instructions; and

means for executing said sequence of instructions on said resource-constrained device.

124.(Previously Presented) The apparatus of claim 123, further comprising means for accessing said software program over a computer network prior to downloading said program onto said resource-constrained device.

125.(Previously Presented) The apparatus of claim 123, further comprising means for storing said sequence of instructions on said resource-constrained device.

126.(Previously Presented) The apparatus of claim 123, further comprising means for accessing said software program over the Internet prior to downloading said program onto said resource-constrained device.

127.(Previously Presented) The apparatus of claim 123, further comprising means for transforming constant pool indices that appear in the received set of instructions to corresponding data values.

128.(Previously Presented) The apparatus of claim 123 wherein one or more of said references to said constant pool are transformed into inline data in operands in one or more of said instructions.

Appl. No.: 09/243,101  
Amdt. dated: March 8, 2004  
Reply to Final Office Action of November 19, 2003

Docket No. SUN-P3729  
(811173-000184)

129.(Previously Presented) The apparatus of claim 123 wherein one or more of said references to said constant pool are transformed into inline data in operation codes in one or more of said instructions.

130.(Previously Presented) The apparatus of claim 123 wherein said resource-constrained device is based on a 16-bit processor architecture.

131.(Previously Presented) The apparatus of claim 123 wherein said resource-constrained device is based on an 8-bit processor architecture.

132.(Previously Presented) The apparatus of claim 123 wherein said memory comprises a random access memory with a capacity of no more than about 64 kilo-bytes.

133.(Previously Presented) The apparatus of claim 123 wherein said memory comprises a random access memory with a capacity of no more than about 4 kilo-bytes.

134.(Previously Presented) The apparatus of claim 123 wherein said instructions are configured for execution by a virtual machine running on a microprocessor residing on said resource-constrained device.

135.(Previously Presented) The apparatus of claim 123 wherein said resource-constrained device comprises a smart card.

Appl. No.: 09/243,101
